

MoDNS:

A plugin based DNS system

Domain Name System (DNS) is the service used to convert hostnames to IP addresses.

There are many DNS tools on the market :

- PiHole
- DNSSEC
- DNS Cache

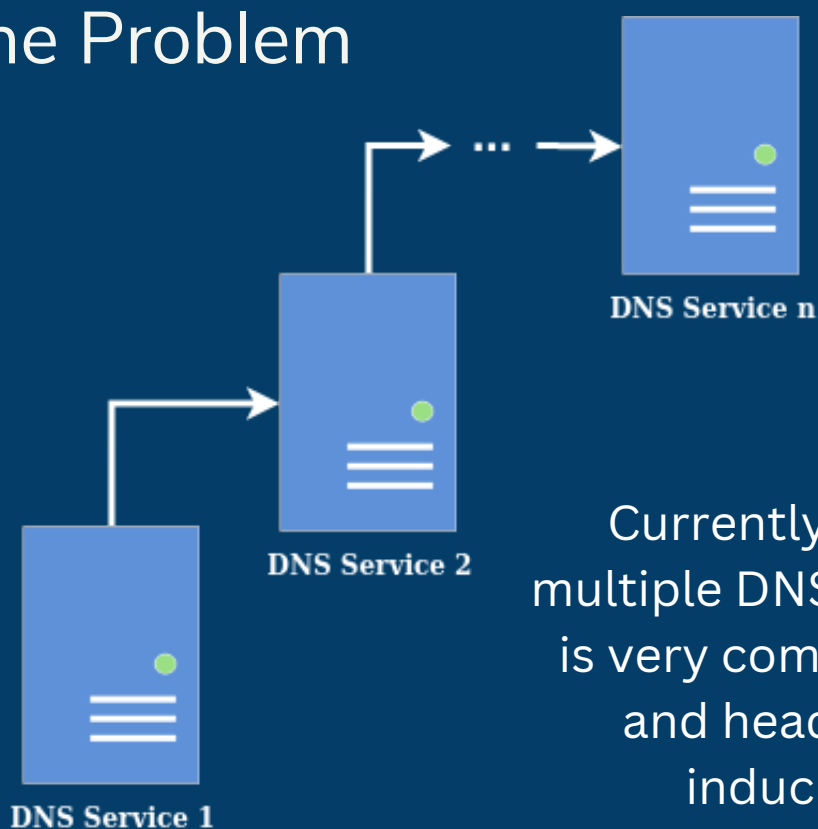

Pi-hole

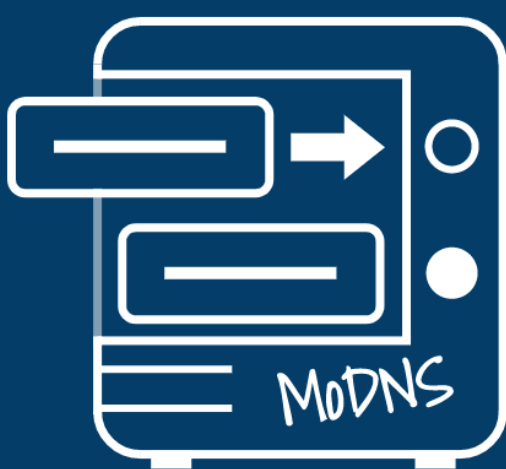

But there is a problem!

The Problem

Currently using multiple DNS services is very complicated and headache inducing

The Solution

It's Fast!

Written in the Rust programming language

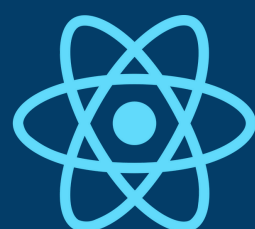

Plugins written in compiled languages

Simple to use!

Frontend created with React

- Simple
- Intuitive
- Customizable

15 Different customization options
